

Approved Equal Request (for all bus specs):

Safety Equipment:

Will KPTA accept a back-up camera in lieu of the back-up sonar integrated into the rear step bumper?

This back-up camera viewing will be located in the rear view mirror when the bus's transmission has been put in reverse. The viewing goes away when the bus's transmission is taken out of reverse. These back-up cameras are more cost effective and also more feasible to use than the back-up sonar integration which has become outdated. **Follow Bid Specifications**
